

Suraksha Parchi

Clear Parchi, Safe Patient

- Team CHANAKYA — Ayush Pandey (Leader) • Kaushal Rawat (CMO) • +2 joining
- Mentor: [To Fill] • ayush4ru@gmail.com • Hindi • Bengali • Marathi
- Photo lo, Bhasha me samjho — a working app, not a concept

TEAM CHANAKYA

HI • BN • MR

Nobody can read the parchi

- 60%+ prescriptions still handwritten in English — elders and migrants just guess
- Half of all patients take the wrong dose; 1L+ deaths a year from medication errors
- Half-finished antibiotics are fuelling drug resistance across India
- 10L+ ASHA workers carry village healthcare — with zero tools for this

Dr. Sharma • Rx

Tab. Crocin 650 — 1-0-1 x 5 days

Tab. Azithro 500 — 1-0-0 x 3 days

Syp. Cough — 2 tsp night

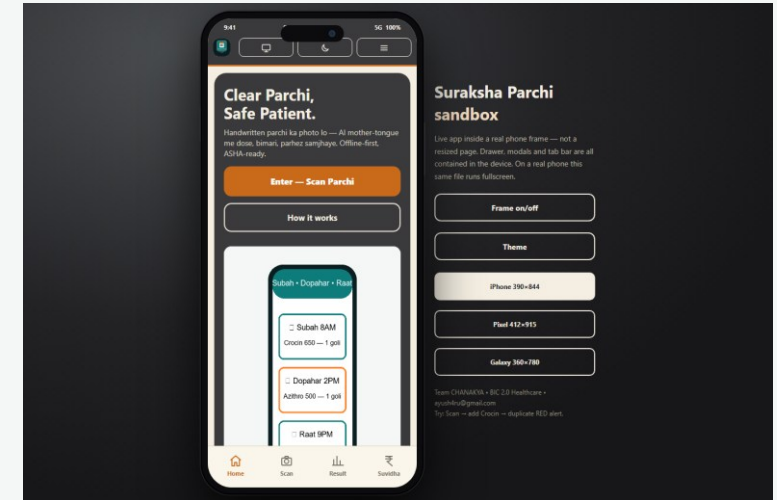

HbA1c 8.2 • BP 150/95

A real parchi: Crocin + Azithro + HbA1c 8.2 — to most families, just scribble.

3 EXISTING SOLUTIONS & GAP ANALYSIS

Apps exist. Not for Bharat.

- City health apps need English + internet — and ignore handwriting completely
- Basic scanners read print, fail on cursive; our test: barely half the drugs right
- Symptom chatbots guess doses and hallucinate — dangerous with medicines
- Nobody combines: messy-handwriting read + mother-tongue voice + pictograms + duplicate alerts + ASHA offline mode

Our answer runs as a real phone app — full-screen on mobile, sandbox on desktop.

4 PROPOSED SOLUTION

Photo lo → samjho → yaad rakho

- Scan the parchi → hybrid AI reads it → explains disease + dose by voice → timetable reminds, red flags warn

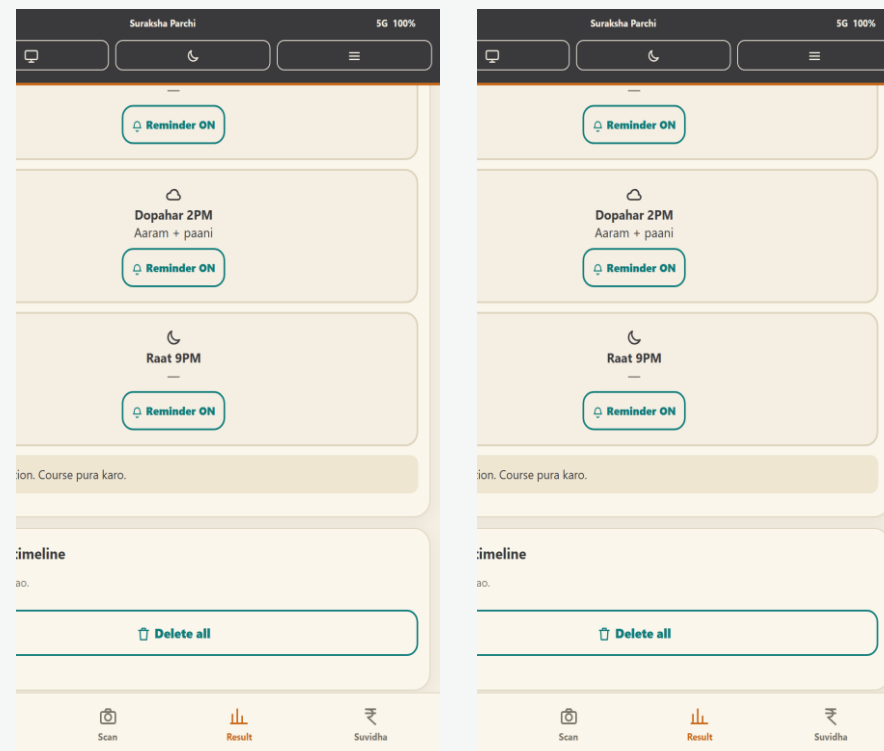

14MB of AI that lives in the phone

- Needle-2 (45M params, 13.74MB) — downloaded, wired and tested on our medicine tools
- Hybrid read: instant on-device scan, smart cloud pass only when handwriting is messy
- Grounded answers: 49-medicine verified DB + 12 interaction rules — the AI can never invent a dose
- Voice in Hindi, Bengali, Marathi (Bhashini + offline fallback); works with zero internet

Working app — try to break it

- Real flow: sample parchi → 87% read → Hindi voice + pictogram timetable
- Crowd moment: add Dolo beside Crocin — RED duplicate-overdose alert fires
- Suvidha tab: Jan Aushadhi prices, Ayushman packages, one-tap helplines
- Backup: 5-minute narrated Hinglish demo video (demo_video_app.mp4)

Built for dadi. Ready for 100Cr.

- Elders and low-literate families — voice + pictures, zero English needed
- Migrants — Bengali and Marathi out of the box, more languages plug in
- 10L+ ASHA workers — doorstep scans, referral slips, adherence ticks
- Jan Aushadhi counters — scan once, print the timetable in 3 languages

Fewer wrong doses, finished courses

- Adherence +40% via voice + reminders — measured per family in the pilot
- Antibiotic course completion +35% — a direct hit on AMR
- Duplicate and overdose alerts catch emergencies before they happen
- Sugar/BP cross-checks catch uncontrolled cases weeks earlier — SDG-3

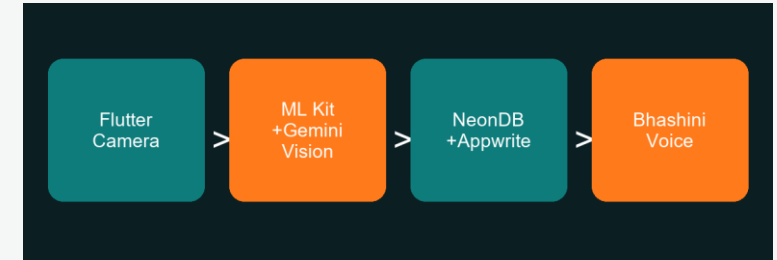

Pilot: 500 families via 1 health centre. KPIs: scans, adherence %, alerts, referrals.

Free for families. Paid by systems.

- Families: free 10 scans a month, Rs 99 a year for unlimited + Sehat File history
- Pharmacy kiosks at Rs 500 a month — scan, explain, print the timetable
- Health centres and blocks via NHM/CSR pilots — ASHA dashboards included
- Phase 2: Rs 299 beeper pill-box + BP-link hardware, funded by kiosk revenue

Built in weeks. Scales to Bharat.

- App + verified DBs + tested AI engine — a school team built this in weeks, under Rs 2,000
- New language = one voice + one data column; Postgres scales to lakhs of families
- Messy writing fails → human confirm button; risky drugs → referral only, never a guess
- No internet → cached scans + offline voice; the expo-hall failure mode is designed out

A guardian, not another chatbot

Feature	Suraksha Parchi	Health chatbot	Scanner app
Handwriting + mother-tongue voice	YES, cited + pictograms	NO	Text only
Duplicate + lab cross-check	YES, with red flags	NO	NO
Offline + ASHA workflow	YES, cached + referral	NO	NO

Moat: 500 real Indian parchi scans (consented) + ASHA workflow + offline-first. Dataset + guardrailed prompts = IP.

CHANAKYA — Niti se Nirman tak

- Ayush Pandey — Leader: product, app + AI engine, database design
- Kaushal Rawat — CMO: field testing, ASHA interviews, Bengali/Marathi content
- +2 teammates joining: designer + tester • Mentor: [To Fill]
- Ask: one health centre, 500 families, 4 weeks — then scale with you
- ayush4ru@gmail.com • github.com/Sentinal-Corporations/suraksha-shartha
