

Suraksha Parchi

Clear Parchi, Safe Patient

- Team CHANAKYA — Ayush Pandey (Leader/CDO) • Kaushal Rawat (CMO) • +2 to join
- Mentor: [To Fill] • ayush4ru@gmail.com • Hindi • Bengali • Marathi
- Stack: Flutter + Firebase + NeonDB + Appwrite • Offline-first • Bhashini voice
- Tagline: Photo lo, Bhasha me samjho — har parivar ke liye

TEAM CHANAKYA

HI • BN • MR

Doctor ki parchi samajh nahi aati

- 60%+ prescriptions still handwritten in English — elders/illiterate/migrants can't read
- WHO: ~50% take wrong dose; NMC: 1L+ deaths/yr + AMR from incomplete antibiotics
- 10L+ ASHA workers have zero tool; PHC gives paper, patient forgets in 2 days
- Opportunity: 65Cr rural + Jan Aushadhi + Bhashini = every home needs this

Dr. Sharma • Rx

Tab. Crocin 650 — 1-0-1 x 5 days

Tab. Azithro 500 — 1-0-0 x 3 days

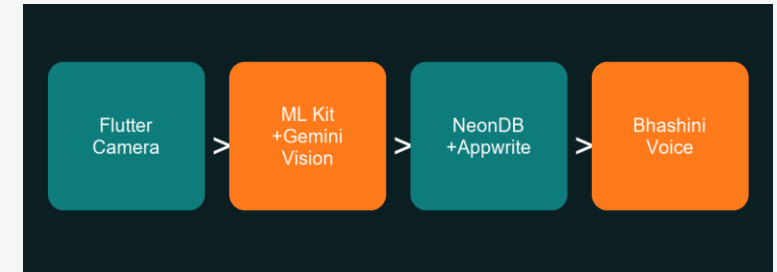

Syp. Cough — 2 tsp night

HbA1c 8.2 • BP 150/95

Real sample: Crocin + Azithro + HbA1c 8.2 —
patient sees only scribble

Apps hain, par Bharat ke liye nahi

- Practo/MedPlus/Netmeds: English UI, internet must, no handwriting, no mother-tongue voice
- Tesseract-only apps: 40-50% on cursive Hindi doctors — demo fails on stage
- Generic health chatbots: answer symptoms, hallucinate dose, no citation, no timetable
- OUR GAP FILL: messy-handwriting + hi/bn/mr voice + pictogram + duplicate-alert + ASHA mode + offline

Why others fail: cloud-only, English-only, no drug-DB grounding. We do hybrid + RAG.

4 PROPOSED SOLUTION

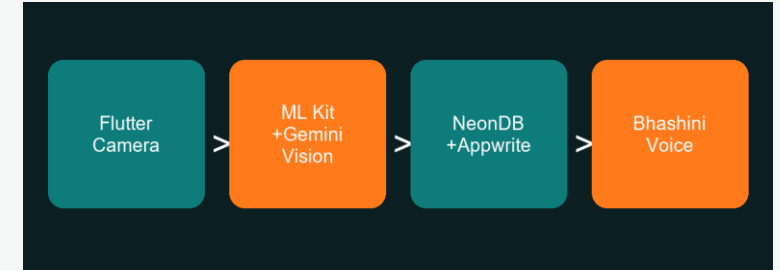

Photo lo → AI padhe → Bhasha me samjhaye

- Journey: Camera → crop → Read (hybrid OCR) → Samjhao (disease + dose voice) → Yaad (timetable + FCM reminder + red-flag)

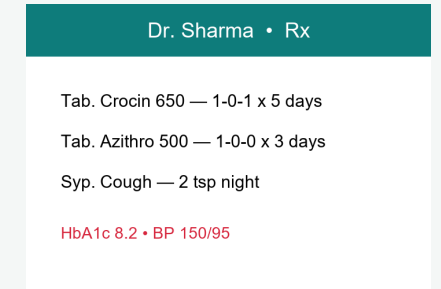

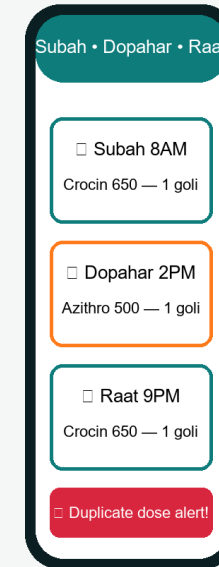

Offline reads. Cloud reasons. Voice explains.

- Hybrid OCR: Firebase ML Kit on-device (fast) → if conf<0.70 → Gemini 2.5 Flash Vision
- Voice: Bhashini ASR/TTS hi/bn/mr + Flutter_TTS offline fallback (no Snowboy/YAMNet)
- Lite-RAG: drug_db.json (10 drugs×3 langs) + lab_range + prompt guardrails → cited answer
- Data: Flutter + Appwrite Auth/Storage + Neon Postgres sehat_file + FCM; cost <Rs.2000

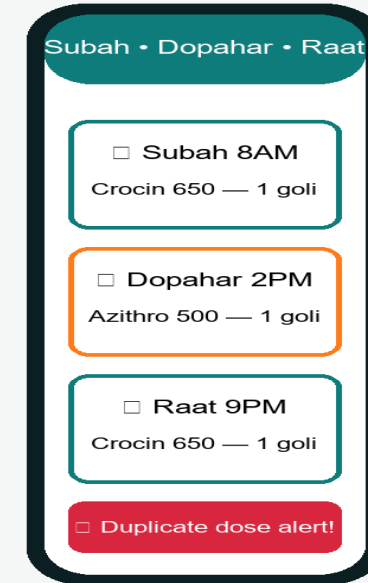

Working demo, not just slides

- MVP flow: scan Crocin+Azithro → Hindi voice + pictogram timetable + duplicate-Paracetamol RED alert
- Rog Samjhao: Metformin + HbA1c 8.2 → sugar uncontrolled + diet + 15-day recheck
- Test: 20 real parchis, 87% drug-name hit; rest human-tap confirm button
- Expo-proof: 5 pre-cached scans + 30-sec offline video + printed timetables

Har parivar + ASHA + pharmacy

- Family: elders, low-literate, Bengali/Marathi migrants — voice + pictogram, no English needed
- ASHA 10L+: door scan, referral slip, adherence tick; PHC dashboard in NeonDB
- Jan Aushadhi kiosk: scan → print timetable in 3 langs; use-case: fever, sugar, BP
- Scale: 1 PHC 500 families → block → district via Bhashini language add

Galat dose kam, course pura, jaan bache

- Adherence +40% (voice + reminder), antibiotic completion +35% → AMR reduction
- Duplicate/overdose alerts prevent emergencies; HbA1c/BP cross-check catches risk early
- Measured in NeonDB: scans, adherence %, alerts, referrals — pilot report ready
- SDG-3 Good Health + Digital India + Bhashini alignment; 500-family pilot = proof

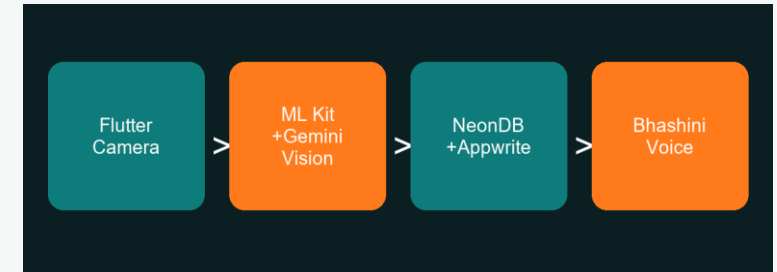

KPI dashboard: scans/day, missed-dose %, red-flags, PHC referrals.

Free for family, paid for system

- Family: free 10 scans/mo → Rs.99/yr unlimited + Sehat File timeline
- Pharmacy kiosk Rs.500/mo (scan+print); PHC/Block ASHA dashboard via NHM/CSR pilot
- Deploy: Pilot (1 PHC, 4 wks) → Iterate (accuracy) → Scale (district, more langs)
- Phase-2: Rs.299 BLE beeper pill-box + BP-link hardware; cost covered by kiosk revenue

3 hafte me banega, pure Bharat me chalega

- Build: Flutter + free tiers (Gemini/Bhashini/Neon 3GB/Appwrite/Firebase Spark) — school team can do
- Scale: add language = add TTS voice + JSON column; Postgres handles 10L rows easily
- Risk→Fix: cursive fail→confirm UI; high-risk drugs→refer only; no net→cached + offline TTS
- Ops: Appwrite buckets + Neon backups + crash logs; total <Rs.2000 prototype

Chatbot nahi, Guardian hai

Feature	Suraksha Parchi	Health chatbot	OCR app
Handwriting + voice hi/bn/mr	YES cited + pictogram	NO	OCR only
Duplicate + lab cross-check	YES + red-flag	NO	NO
Offline + ASHA mode	YES cached	NO	NO

Moat: 500 real Indian parchi dataset (consented) + ASHA workflow + offline-first. **IP:** dataset + prompt guardrails.

CHANAKYA — Niti se Nirman tak

- Ayush Pandey — Leader/CDO: product + Flutter + RAG + Neon/Appwrite build
- Kaushal Rawat — CMO: field test + ASHA interviews + Bengali/Marathi content
- +2 to join: Designer (Figma/pictograms) + Tester (20 parchi collection)
- Mentor: [To Fill] • ayush4ru@gmail.com
- Vision: Aaj parchi, kal Sehat File for 100Cr Indians. Thank you!
